Re: HB 6055 will harm developers

Dear Members of the House HIIIT Committee:

On behalf of the Developers Alliance, I write to offer our views on how HB 6055 would undermine a thriving ecosystem of application developers and technology services that has helped the United States become the global leader of the app economy. The bill would create significant uncertainty in the market, destabilize a robust ecosystem of developers and consumers, and harm Rhode Island software developers.

The Developers Alliance represents over 70,000 developers from 50 states and many countries including the EU, UK, Canada and Australia. We have provided testimony before the U.S. Congress, filed educational briefs at the U.S. Supreme Court, and have advocated for software developers for almost a decade. Our members believe that the current ecosystem is generally working well, allowing them to profitably reach consumers around the world.

The ecosystem around app stores frees-up developers to focus their work on harnessing software to build better lives, unburdening them from secondary activities such as setting up systems to collect and remit sales taxes, establishing fraud-proof payment systems, scanning their network for malware, protecting customer data, and managing engagement with users. While developers and app stores don't always agree, the system functions well and has been central to the success of local developers and their ability to scale and reach new markets. Developers are not asking for legislative help.

HB 6055 threatens an ecosystem that benefits both platform companies and developers, as the bill reduces the incentives for collaboration that drive our platform partners to create tools, services and educational support for emerging developer companies. Contrary to what we know from our discussions with developers across the country, this bill portrays our members as victims in a system of economic abuse. We fear that the rhetoric of "fighting for the little guy" is being used to advance the interests of a lobby that is neither small nor without its own influence. While we cheer the adversarial spirit that makes the software sector such a dynamic and innovative space, we are disappointed when our community is used to justify market distorting regulation in place of fair competition between large, successful companies.

Rhode Island's effort to regulate a global ecosystem threatens to add to a growing thicket of extraterritorial internet regulation, creating uncertainty for developers, deterring investment in Rhode Island, reducing innovation, and driving up costs. HB 6055 invites reciprocal and potentially conflicting regulations from other States and other countries, a real and growing crisis for developers the world over.

In short, our developer members are not asking for this intervention, and fear its adoption will hurt their ability to succeed from a base in Rhode Island. We'd welcome the chance to share our thoughts on changes which truly would benefit consumers and the local developer community.

The Developers Alliance appreciates the opportunity to engage with you on this important topic and we look forward to answering any questions you might have.

Sincerely,

Bruce Gustafson, CEO

Founded in January 2012, the Developers Alliance is a global industry association that supports software developers as entrepreneurs, innovators, and creators.
